

Technical Project Leader/Manager

This position will be responsible for managing multi-disciplined engineering projects for new product development or modification of existing products.

We'll be looking for someone with a Bachelor's Degree in Electrical Engineering, Mechanical Engineering, Software Engineering, or Computer Engineering. A Master's degree in Engineering or Business Administration is a plus.

Candidates will need a minimum of 10 years of technical engineering experience and a minimum of 5 years of product development project management experience. A Systems engineering background where the candidate served in a lead technical role prior to managing projects is desirable.

Industry experience developing electromechanical products equipped with a HMI is preferred.

There will be domestic and international travel, 10 to 35 days per year total.

This person needs to be able to develop, plan, and manage the activities associated with one large project or several smaller projects including custom applications and non-conformances. The position is responsible for building project plans, completing risk registers, error budgets, etc. A typical project team is comprised of 5 to 10 engineers from different disciplines including electrical, mechanical and software.

Key performance metrics include projects delivered on time, within budget that perform to specifications, as well as the professional development of project team members.

We offer a competitive salary and comprehensive benefits package.

For consideration, please email resume and cover letter to projectmgr@agrintl.com.
